

From the project terminal

1. CD to front-end
2. CD to secure-encryption-service
3. Run “npm install” to download necessary dependencies
4. Run npm start (the front end should now run)
5. Open a new terminal
6. CD to back-end
7. Run “npm install”
8. Run npm start (the back end should now run)
9. If any dependency errors show up such as firestore etc please download those libraries in the necessary folders.
